RELISH
DATA ASSURE

FULLY AUTOMATIC SUPPLIER DATA VALIDATION IN ONE STEP, WITHOUT HUMAN INTERACTION

REDUCE INEFFICIENCIES ASSOCIATED WITH SUPPLIER DATA INTEGRATION

Incorrect supplier data is validated, flagged, or rejected ensuring accurate information is collected. The **DATA ASSURE** platform validates legal name, address validation, IRS tax number, OFAC check, Denied Persons List, and more. Custom validations are also available.

REDUCE SUPPLIER REGISTRATION DATA ERRORS

A reduction in the number of supplier registration data errors and elimination of manual data validation. Supplier data is validated in real-time, no more searching for the correct supplier data.

VALIDATE SUPPLIERS ARE LEGITIMATE AND TRUSTED

Suppliers are vetted using Office of Foreign Assets Controls (OFAC) Check, Excluded Partied List System (EPLS) and Excluded Individuals and Entities (LEIE) to ensure your suppliers have not been debarred, suspended, excluded or disqualified. Ensure you are working with legitimate, trusted suppliers.

CLEAN DATA IN YOUR ERP

One-step supplier validation ensuring all data entering your ERP is accurate and up-to-date. An automatic process to ensure your data is reliable, supports compliance and supports an efficient ordering and invoicing process. Empower your workforce to focus on value-added activities.

AUTOMATE THE SUPPLIER DATA GATHERING PROCESS

Reduce cycle time and remove manual interaction with the supplier data gathering and validation process.

REVALIDATE SUPPLIER DATA AT ANY TIME

Manually revalidate your supplier data as often as you need to ensure all data is up-to-date and reliable. Or automate regular validations to reduce human interaction and keep your supplier data accurate.

RELISH

SUPPLIER DATA ASSURE - CUSTOM SOURCES

Are you subscribed to other expert sources that are required in the registration process? Relish will integrate lookups to those services and include the findings in the base package process, so you don't have to do the manual lookups yourselves. Relish already has a growing library of integrations for "deeper dives" on suppliers with BvD, EcoVadis, D&B, ISNetworld, GIACT, GAN and more.

PII PROTECT AND ASSURE

Are you concerned that some suppliers may want to give you their SSN as their tax ID or their personal banking information? Some Spend Management systems explicitly forbid collecting such "PII" (personally identifiable information) and most other organizations may lack the security infrastructure to maintain this data. Relish has the necessary infrastructure and can act as a safe harbor to collect, verify and encrypt supplier PII data so that the registration process can proceed. Optionally add secure decryption and integration of the PII data to downstream ERP/Payments system(s) as needed.

SECURE DOCS AUTOMATION

It is a requirement in the US that IRS forms W9 and W8 are collected from all suppliers. Avoid the manual process of verifying info on these forms against supplier database information by letting Relish automatically read and compare these forms. Add this process to the PII Protect and Assure workflow if the supplier indicates that these forms will include PII information.

SUPPLIER TAX DETERMINATION

Want integration to a robust tax determination and tax form provider inside your registration process? IHS Markit walks suppliers through their tax determination journey and ends with a fully signed and authorized W8 or W9 and Relish can seamlessly integrate those results into the Supplier Registration process so your supplier data stewards only deal with the exceptions.

DATA ASSURE ADD-ON - ENRICHMENT INTERFACE

Want to see the Data Assure results in detail and leverage them to enrich your supplier information? Introduce the Relish user interface to your supplier data stewards so they can normalize supplier information, make detailed decisions on disposition of findings and escalate on a case-by-case basis.
