

Automate, Validate, and Secure Supplier Data with Confidence

In today's digital age, where fraud attempts are more prevalent than ever, relying solely on manual validation puts your organization at risk. Supplier data validation goes beyond simple accuracy—it offers security and safeguards against internal and external threats. While companies have invested in data collection systems, manual validation remains an issue. This isn't merely an efficiency problem; it's about building robust defenses in a continuously evolving risk landscape.

Why Choose Relish Data Assure for Data Validation?

DEEP INTEGRATION

Elevate your existing vendor communication tools with seamless data validation to ensure efficiency and context.

AUTOMATED SECURITY

Eliminate manual checks. With Data Assure, automate supplier data validation, significantly reducing your risk of fraud.

TRUSTED AND COMPREHENSIVE

Our dynamic data sources ensure real-time validation and offer the flexibility to integrate more sources based on your requirements.

DATA INTEGRITY

We prioritize the security of your data, ensuring no storage of sensitive bank records or unauthorized usage.

EFFICIENCY BOOST

Reduce errors and amplify the performance of your supplier management systems by minimizing manual interventions.

Core Features of Relish Data Assure:

SEAMLESS VALIDATION

Real-time supplier data compliance checks with recognized sanctions lists.

GLOBAL REACH

Supplier data validation capabilities in over 110 countries to mitigate risks across international operations.

QUICK IMPLEMENTATION

Benefit from rapid deployments with our integration-first approach. Get your system up and running without any delays.

TRANSPARENCY

Achieve full clarity at every stage with auditable and reportable validations.

Mitigate Fraud Risk Across the Spend Management Process

Apply automated checks in the supplier onboarding process to stop possible fraudsters at the front door. Re-check when suppliers change their information and run periodic checks for risky suppliers. Better yet, add automation to the invoicing process when processing one-time suppliers for payment.

Add-Ons: Bring Further and Deeper Validations to Your Data

SUPPLIER DATA ASSURE - CUSTOM SOURCES

Are you subscribed to other expert sources that are required in the registration process? Relish will integrate lookups to those services and include the findings in the base package process, so you don't have to do the manual lookups yourselves. Relish already has a growing library of integrations for "deeper dives" on suppliers with Bureau van Dijk, a Moody's Analytics company, EcoVadis, D&B, ISNetwork, GIACT, GAN and more.

PII PROTECT AND ASSURE

Are you concerned that some suppliers may want to give you their SSN as their tax ID or their personal banking information? Some Spend Management systems explicitly forbid collecting such "PII" (personally identifiable information) and most other organizations may lack the security infrastructure to maintain this data. Relish has the necessary infrastructure and can act as a safe harbor to collect, verify and encrypt supplier PII data so that the registration process can proceed. Optionally add secure decryption and integration of the PII data to downstream ERP/Payments system(s) as needed.

SECURE DOCS AUTOMATION

It is a requirement in the US that IRS forms W9 and W8 are collected from all suppliers. Avoid the manual process of verifying info on these forms against supplier database information by letting Relish automatically read and compare these forms. Add this process to the PII Protect and Assure workflow if the supplier indicates that these forms will include PII information.

US BANK ACCOUNT OWNERSHIP VALIDATION

Through our partnership with GIACT Relish enables automatic confirmation that a US bank account is owned by the correct entity, open, active and in good standing. Your subscription to GIACT allows you to embed this validation directly into your supplier registration workflow. Relish manages the integration between GIACT and your system to help prevent fraud prior to payments and reduces the need to call banks for validation.
